

**Tip #4**

Keep your outdoor unit free of debris for optimal performance.

VO: Don't let stray branches outside interfere with your indoor comfort. Make a habit of checking your outdoor unit and clearing it of any debris, such as twigs and leaves, that may be in the way. Clear away any buildup while you're doing your spring cleaning will not only help ensure optimal performance from your unit during the warmer months, but also deliver confidence it's operating efficiently.
