

**Tip #2**

Set your thermostat for energy savings.

VO: Heating and cooling can account for more than half of your home's energy costs. A programmable, Wi-Fi thermostat like the Infinity System Control provides confidence you're saving energy all year by letting you create comfortable settings for when you're home and setting temperatures back when you're away or asleep. Installing your thermostat away from heat sources like windows will help keep your system from running excessively - and keep more money in your wallet.
